

# Runway Closures & Flight Check Schedules

Duration	Runway	Test Equipment	Status
August 17-31, 2009	Runway 6R-24L		Closed

The Federal Aviation Administration (FAA) performs flight checks to maintain effective and efficient aircraft operations. The Flight Checks simulate conditions pilots encounter when landing aircraft. The conditions include both visual and instrument approaches. The flight checks are used to ensure the following: The Navigational Aids are tuned correctly and functioning properly. The Airport Lighting Systems, utilized during landing, are functioning properly. Runway Markings are installed correctly and visible from the air. While the dates are known, the time of day of each occurrence remains unknown.
